"EMODnet by and for wider society"

Speaker: Antonia Leroy, WWF European Policy Office, aleroy@wwf.eu

- Use data to inform civil society, policymakers on policies implementation (MSP, MPAs, FISHERIES within the FISH-X project)
- Contribute and share data on small-scale fisheries, seabirds and we are looking at how to provide data on blue corridors

Missing piece:

- Only 10 out of 22 maritime spatial plans in EMODnet.
- No common methodology to describe polygons in the Map Viewer. Meaning, a user can access the information regarding each designation without leaving the platform.
- MSFD data is missing from the viewer. This means it is currently impossible to compare the different human activities to the environmental status of marine environment.
- What about upcoming restoration plans? MPAs interactive map?
